

# 1200W Solar Retrofit

## Overview

---

What is solar retrofit?

Solar retrofit is the process of upgrading existing solar energy systems to improve their efficiency, functionality, or capacity. This can involve modifications such as adding new solar panels, power optimisers or inverters to meet increased energy demands or enhance system performance.

Should you retrofit a solar energy system?

Let's say you've owned a solar energy system for several years, and over time, your energy needs have expanded. Whether you need more power to charge a new electric vehicle or because of increased home consumption (maybe you invested in a new heat pump), there are many reasons why people may want to retrofit an existing solar energy system.

Are solar battery retrofits a good idea?

Homeowners and businesses are increasingly seeking to enhance their energy independence through solar battery retrofits. These battery systems allow for the storage of excess solar energy generated during the day, enabling use during high electricity prices or at night.

Why should you choose Growatt for solar retrofitting?

This holistic approach to energy management enhances cost-effectiveness and energy independence for EV owners. As one of the world's leading solar solution suppliers, Growatt offers several solutions for solar retrofitting, ensuring that existing solar systems can meet diverse energy needs effectively.
