

# **A solar panel for a home solar power generation system**

## Overview

---

What is a residential solar system?

Residential solar systems utilize photovoltaic (PV) panels to convert sunlight into electricity, powering your home with renewable energy. These systems typically include solar panels, an inverter to convert direct current (DC) to alternating current (AC), and sometimes a battery for energy storage.

What is a solar PV residential system?

These systems typically include solar panels, an inverter to convert direct current (DC) to alternating current (AC), and sometimes a battery for energy storage. The solar PV residential systems can power your home directly, store energy for later, or send excess energy back to the grid.

Do solar panels produce more energy than a home needs?

Solar panels can produce more energy than your home needs. In that case, the extra solar energy can be sent back to the utility grid or stored in a battery system for later use. There are three main types of solar power systems: grid-tied, hybrid, and off-grid systems, which we explain in the videos below. How do grid-tied solar systems work?

.

How do solar panels work?

Solar panels contain photovoltaic cells that absorb sunlight and create an electric field, generating direct current (DC) electricity. An inverter converts this DC power to alternating current (AC) electricity compatible with your home's electrical system. How long do solar panel systems last?

Quality solar panel systems last 25-30 years or more.
