

## A string of solar panels

## Overview

---

What is a solar string?

A string consists of solar panels wired in a series set into one input on a solar string inverter. If you have two or more solar panels wired together, that is a solar / PV array. String sizing refers to how many solar panels can and should be wired to an inverter for best results.

What is a solar string inverter?

Solar string inverters have an input for each string, which is made up of solar panels connected in sequence. A photovoltaic or PV array is created when two or more solar panels are connected. So, what is the difference between string and array in solar panel?

Read the blog to learn about what is a string of solar panels and other related facts.

What is the difference between a solar panel and a string?

A solar panel or PV module is made up of several cells, while multiple solar panels wired in a series or parallel is called a solar array. A string consists of solar panels wired in a series set into one input on a solar string inverter. If you have two or more solar panels wired together, that is a solar / PV array.

What is solar string sizing?

The design is known as a solar array. A string consists of solar panels that are wired in a series set to one input on a solar string inverter. In case two or more solar panels are wired together, that is a solar / PV array. String sizing depicts how many solar panels can be wired to an inverter to obtain the best results.
