

Air Energy Storage Sales Plan

Overview

What is compressed air energy storage?

Compressed air energy storage (CAES) is one of the many energy storage options that can store electric energy in the form of potential energy (compressed air) and can be deployed near central power plants or distribution centers. In response to demand, the stored energy can be discharged by expanding the stored air with a turboexpander generator.

Does Kansas have a compressed air energy storage Act?

For example, the state of Kansas has facilitated these processes with their Compressed Air Energy Storage Act , effective since 2009. A study that reports on promising locations, permitting processes and challenges, and mitigating solutions would help developers navigate these issues during the planning phase.

How much does stored electricity cost?

A number of recent techno-economic studies have estimated CAES-based stored electricity costs at \$0.15 to \$0.60/kWh , . The Framework Study identifies promising RD&D pathways to reduce the levelized cost of storage (LCOS) of key storage technologies.

What is liquid air energy storage (LAEs)?

S-based power systems. Liquid Air Energy Storage (LAES) is a game changing technology which can unlock the full potential of renewable energy by making it as reliable and dispatchable as energy

Air Energy Storage Sales Plan

Technology Strategy Assessment

About Storage Innovations 2030 This technology strategy assessment on compressed air energy storage (CAES), released as part of the Long-Duration Storage Shot, ...
