

Annual supply of energy storage containers

Overview

How much does energy storage cost in 2023?

As of the end of 2023, global investment commitments for storage reached \$36 billion (Energy Storage News, 2024). However, this was a 76% year-on-year growth, and it is set to accelerate to keep up with the renewable energy sector's expansion. BNEF estimates point to an annualised \$93 billion in spending on storage over the next decade.

Which country has the most energy storage capacity?

Almost 80% of the total installed energy storage capacity base, worth 7GWh, is from the residential sub-segment. Germany is among the top European countries in residential battery storage market. So far, growth has been through the volumes in the residential storage market segment.

Should energy storage be developed?

Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the 2022 level. As a result, InfoLink maintains a cautiously optimistic outlook for the medium- to long-term development of energy storage systems.

Is the energy storage industry aligned with the industry's needs?

The country's policy and regulatory framework, while recognising the energy storage assets in the system, is yet to be aligned with the industry's needs. Fundamental regulatory changes are required in areas such as charges payable by the storage units or the tax incidence. Recent steps taken indicate progress.
