

Apia New Energy Storage Power Station Construction

Overview

What is Ningxia power's energy storage station?

On March 31, the second phase of the 100 MW/200 MWh energy storage station, a supporting project of the Ningxia Power's East Ningxia Composite Photovoltaic Base Project under CHN Energy, was successfully connected to the grid. This marks the completion and operation of the largest grid-forming energy storage station in China.

Are pumped-storage power stations a new investment hotspot in China?

Due to the demand for new energy installations, pumped-storage power stations have become a new investment hotspot in China's power industry. According to official data, by the end of 2024, China's installed pumped-storage capacity had exceeded 58 million kilowatts, with the industry showing an overall positive development trend.

What is the largest grid-forming energy storage station in China?

This marks the completion and operation of the largest grid-forming energy storage station in China. The photo shows the energy storage station supporting the Ningdong Composite Photovoltaic Base Project. This energy storage station is one of the first batch of projects supporting the 100 GW large-scale wind and photovoltaic bases nationwide.

Why is Zhejiang's pumped storage power station important?

The pumped storage power station in Zhejiang is not only a major project requiring intensive technology and capital, but also a critical measure in transforming the energy structure and promoting green, low-carbon development, said Zhu Gongshan, chairman of GCL Group.
