# Battery cabinet series and parallel calculation

## Overview

---

How do I calculate a series vs parallel battery?

It couldn't be easier. Just input the number of batteries you're using, whether they're in series or parallel, the current rating (CDR), capacity (mAh) and the voltage of your individual batteries. Hit the calculate button and our Series Vs Parallel Battery Calculator will give you the total combined voltage, CDR and capacity of your batteries!.

What is a series-parallel battery system?

With series-parallel, batteries first link in series, then in parallel, boosting both voltage and capacity. Linking four 12V 26Ah batteries in series gives 48V and 26Ah. However, parallel connecting four 12V 100Ah batteries gives a 12V 400Ah system. Knowing how to connect batteries in series and parallel is key when you design power systems.

How much does a series parallel worksheet cost?

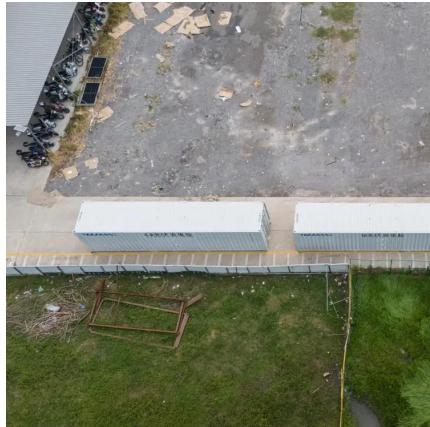

The SeriesParallel worksheet hopefully gives you a tool that allows you to understand how changing the configuration of a battery pack changes the voltage range, total energy and mass. This can be purchased as a one off for \$15 or get all updates for a year and access to the databases for \$25.

How do you wire a 100 Ah battery in parallel?

If you connect two 100 Ah batteries in parallel, you'd effectively have a 200 Ah capacity, still at 12 volts output. To wire multiple batteries in series, you connect each one by joining the positive of one to the negative of the next. This setup increases the total voltage but keeps the capacity the same as one battery.
