

Belgian farm installs solar air conditioner

Overview

How much agrisolar energy does Belgium produce a year?

1 hectare of agrisolar - about 1.5 soccer fields - has a capacity of 1,000 kWp and generates about 1,000 MWh annually in Belgium. That's enough to power about 285 average families. How are we combining agriculture and solar energy?

.

Are farm air conditioning units eco-friendly?

Farm Air Conditioning Units by Seeley International provide an innovative, eco-friendly solution designed specifically for agricultural environments. These advanced systems are ideal for cooling semi-open spaces, offering precise temperature control while significantly reducing energy consumption and environmental impact.

Can solar panels be installed on farmland?

By placing solar panels on farmland, the space has a dual purpose. That makes land use more efficient. Our solar farms are not just compatible with certain farming activities but also enhance them through soil restoration, crop protection and erosion prevention. Also, they have a positive impact on biodiversity.

Should you install a fixed air conditioning system on your farm?

Installing a fixed air conditioning system on your farm creates a stable, comfortable environment for both livestock and staff. By maintaining optimal temperature and humidity levels, the risk of physical and health incidents is minimized, enhancing the well-being of animals and crops.
