Cadmium solar glass

Overview

What is cadmium telluride (CdTe) photovoltaic glass?

Cadmium Telluride (CdTe) photovoltaic glass is a type of solar photovoltaic glass that incorporates thin-film photovoltaic technology based on the semiconductor compound cadmium telluride.

Are cadmium telluride-based cells better than Si?

Cadmium telluride (CdTe)-based cells have emerged as the leading commercialized thin film photovoltaic technology and has intrinsically better temperature coefficients, energy yield, and degradation rates than Si technologies.

What is cadmium telluride (CdTe)?

Cadmium telluride (CdTe) thin-film PV modules are the primary thin film product on the global market, with more than 30 GW peak (GWp) generating capacity representing many millions of modules installed worldwide, primarily in utility-scale power plants in the US.

Can cadmium zinc Telluride and cdmgte be used together?

The incorporation of zinc or magnesium to form cadmium zinc telluride (CdZnTe) and cadmium magnesium telluride (CdMgTe) represents a possible way to move the bandgap into a viable regime for tandem incorporation, but using these materials introduces processing challenges that have thus far prevented their use in high-throughput manufacturing.
