

Cambodia s energy storage exports account for 20

Overview

How has the energy supply in Cambodia changed over the years?

Total primary energy supply (TPES) increased by 5.8% per year in 2000–2010 and by 8.0% per year in 2010–2019, showing the same trend as that of TFEC. Due to the significant increase in electricity demand, Cambodia rapidly increased its hydropower and coal power generation in 2010–2019.

What are the main energy sources in Cambodia?

Oil, biomass, and coal are the main energy sources, accounting for 90% of total energy consumption. Around 86% of the coal is consumed for power generation. In its new Power Development Plan, Cambodia plans to invest US\$1.8bn to improve its electricity transmission network.

How much coal is used for power generation in Cambodia?

Around 86% of the coal is consumed for power generation. In its new Power Development Plan, Cambodia plans to invest US\$1.8bn to improve its electricity transmission network. Following the Government's decision to stop building new coal plants, a new 900 MW gas plant is expected.

Why did Cambodia increase its power generation in 2010 & 2019?

Due to the significant increase in electricity demand, Cambodia rapidly increased its hydropower and coal power generation in 2010–2019. Liquefied petroleum gas (LPG), used for cooking and as transport fuel, marked a higher increase ratio in 2000–2019.
