

# Can solar container outdoor power be used as battery

## Overview

---

Can you use storage batteries with solar panels?

Combining storage batteries with your solar panels is the best way to use your solar energy, no matter the time of day. Solar energy is intermittent, and your solar panels' power output varies according to several factors: Time of the day/year. Weather conditions. Outside temperature.

Can solar energy be stored in batteries?

Depending on your storage capabilities, solar energy can be stored in batteries. This is due to the fact that the energy stored in panels needs some place to go. This is where batteries come in, and the energy produced from a panel can be transferred to the battery in this case. The batteries will hold the energy, and release it when needed.

Can you put solar panels on a container?

We put solar panels on a container for a guy who was powering an RV on his land. He had a generator, and the container was full of batteries to support himself. When we're on top of a container, we need to build a custom racking system to hold up more than one row of panels, which what we ended up doing for him. (See in image with tan container.).

Why is battery storage important for solar power?

Battery storage for solar power is essential for the future of renewable energy efforts. As the market continues to grow, we expect the adoption of modified shipping container BESS enclosures to grow as well. Containers are an elegant solution to the logistical and financial challenges of the battery storage industry.
