Communication 5g base station switch disconnection

Overview

What is BS switching on/off strategy?

Many of the previous works proposed BS switching ON/OFF strategies based on the underlying network traffic (ye2019drag, ; gao2019user, ; wu2021deep,). The core idea is to capture the continuous state of traffic demand at the BS and, accordingly, take the switching on/off decision for the BS.

Can 5G New Radio save power?

Thus, to study power-saving schemes in 5G New Radio (NR), some researchers use network simulators like ns-3, which save time and money by allowing them to validate their solutions without needing a physical prototype.

Can BS switching off strategies be validated in a real network simulator?

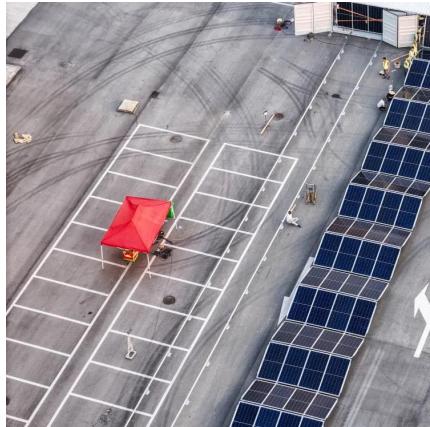

The ns-3 implementation will help the research community validate their implementations of BS switching off strategies in a real network simulator instead of validating them purely on mathematical simulations. However, this pursuit faces various research and engineering hurdles.

What does the switching ON/OFF logic do?

The switching on/off logic performs the following tasks to manage the mmWave BSs and UEs: Switch off IDLE mmWave BS: SmartMME checks the IDLE time of each mmWave BS and switches off those that are not connected to any UEs.

Communication 5g base station switch disconnection

Analysis of the Impact of Substation Switching Operations on 5G Base

A 500kV substation is used to calculate the impact size, and the minimum distance between the antenna of the 5G base station and the switch operation device is determined.
