

# Energy storage power supply vehicle

## Overview

---

What energy storage system does Tesla use?

All of its energy storage units will use Tesla's Megapack electrochemical energy storage system produced at the Shanghai Megafactory. The electricity generated by the photovoltaic system will be directly supplied to the Megafactory, with excess power automatically stored in the Megapack for future use.

Why is Tesla building a large-scale energy storage facility in China?

Their growing use helps stabilize power grids, prevent outages, and reduce reliance on fossil fuels. This project is Tesla's first large-scale energy storage installation in China, complementing its existing automotive manufacturing presence in the city through Giga Shanghai.

How much energy does a Tesla Megapack store?

Notably, each Megapack unit can store over 3.9 megawatt-hours of energy -- sufficient to power approximately 3,600 households for one hour. Tesla anticipates a year-on-year increase of at least 50 percent in its energy storage deployments in 2025. The batteries produced at the factory will supply both the domestic and Asia-Pacific markets.

Will Tesla build a grid-scale battery energy storage station in China?

Tesla has officially signed a ¥4 billion (C\$764/US\$557 million) deal to build its first grid-scale battery energy storage station in China, leveraging its Megapack technology.
