

Finland lighting solar lights

Overview

Does Finland have solar energy?

Contrary to popular belief, Finland's solar energy potential doesn't fall short of that of Central Europe. In the summer, the long days and nearly round-the-clock sunlight compensate for the dark winters. This article's Finnish version was first published in February 2019 and has been updated in June 2023.

Where to see Northern Lights in Finland?

Lakeshores and hilltops, often far from bright lights and buildings, make the perfect spots to witness auroras in Finland. Across Finland, you can find unique places that make northern lights spotting an unforgettable experience.

Why is Finland a good place to install solar panels?

"Finland's advantage is its low atmospheric temperature, which improves the efficiency of solar photovoltaic cells. The colder it gets, the better the solar panels work. Solar panels can also withstand snow loads if they are installed following directions.

Where can you see auroral lights in Finland?

Finnish Lapland is a particularly popular destination for aurora hunters, but with a bit of luck and patience, you might also spot them in other regions, even as far south as the Helsinki region. During clear nights with high auroral activity, the northern lights might be visible all around Finland.
