

Free consultation on bidirectional charging of folding containers for chemical plants

Overview

What is bidirectional charging?

Bidirectional charging describes the technology of not only charging an electric vehicle from the grid, but also feeding electricity back into the grid or to consumers. This is often referred to as Vehicle-2-Grid (V2G) or Vehicle-2-Home (V2H).

Can bidirectional charging transform EVs into mobile energy storage units?

According to the document, “bidirectional charging has the potential to transform EVs into mobile energy storage units, unlocking substantial value across the energy ecosystem.” To help people ‘navigate’ the complexities of bidirectional charging, the document includes eight so-called one-pagers, looking at the different applications.

What is a flexible vessel charging system?

Used for material charging into Reactor Schematic Industries range of flexible vessel charging systems provide a cost effective, safe operator environment against the hazardous powders or liquids whilst undertaking such activities.

What is charging a reactor?

Charging or filling of reactors and other vessels with hazardous, potent and toxic substances is typically required in most chemical and pharmaceutical operations. Used for material charging into Reactor
