# India's mobile energy storage container hybrid

## Overview

---

Are battery energy storage systems right for India?

But India's evolving electricity landscape has created an environment where battery energy storage systems (BESS) can earn strong returns from power exchanges, while offering critical system-level support to the grid. Batteries are increasingly recognised as the multitool of the power sector transition.

What is the share of hybrid energy tender capacity in India?

With a rise in preference for firm renewable energy, the share of hybrid tendered capacity has increased from about 12% in 2021 to over 49% in 2024 in the overall renewable energy tenders. Between 2022 and May 2025, India auctioned approximately 12.8GWh of battery energy storage system (BESS) capacity for both hybrid and standalone applications.

Is battery energy storage the linchpin of India's renewable future?

Battery Energy Storage is the linchpin of India's renewable future. From raw material security to AI-driven smart grids, every element of the ecosystem is evolving. With Amara Raja and startups at the forefront, and strong policy support, India is poised not just to adopt but to lead the global BESS revolution by 2035.

Can battery energy storage help India achieve a 50% non-fossil installed capacity?

India's clean energy transition is accelerating, with ambitious goals of achieving 50% non-fossil installed capacity by 2030. This vision cannot succeed without large-scale energy storage. Battery Energy Storage Systems (BESS) provide the crucial flexibility: they capture excess solar and wind power when available and release it when needed.
