

Install glass outside the solar roof

Overview

Can I put solar panels on my roof?

If you want to take advantage of solar energy but you can't (or don't want to) put solar panels on your roof, you do have other options. As solar panels become more advanced and the technology develops, gathering energy from the sun is growing ever easier and more unobtrusive than ever.

What are solar glass panels?

Solar glass panels, often referred to as solar windows or transparent solar panels, represent a groundbreaking advancement in renewable energy technology. Unlike traditional solar panels that are bulky and mounted on rooftops, solar glass panels are integrated directly into windows or building facades.

Where can I install solar panels?

Here are some great options for installing solar panels in places other than your roof. If you have a south-facing wall on your home with about eight feet by eight feet of space, you can install solar panel siding.

Can solar windows be used as a roof?

This is essentially a giant example of solar windows used as a roof. The PV skylight provides enough power to help run the building's operations and simultaneously reduces lighting needs by flooding the space with daylight. It's an inspiration for malls, office buildings, and even homes (imagine a solar glass sunroom or awning).

[Solar Control Options for Structural Glass](#)

Solar Control Coatings External Blinds External Louvre Systems Internal Blinds Want More Information? A solar control coating is one of the easiest ways to integrate solar control into any glass structure, especially a structural glass install. These transparent coatings are applied to the internal face of the external pane of glass within the unit. They can be applied to a whole range of glass thicknesses which makes them perfect for structural glass. See more on [igglassuk](#) [getpuresolar](#)
