

Introduction of spherical solar energy field energy function

Overview

Could a spherical Sun power generator help us transition from fossil fuels?

The spherical sun power generator sounds like a fantastic idea that could potentially help in the transition from fossil fuels to complete renewable energy. However, with the lack of development and research of "beta.ray" technology, we are quite a long way from these solar spheres becoming a reality.

What is a spherical Sun power generator?

The spherical sun power generator prototype Rawlemon created is called the "beta.ray". This generator will combine spherical geometry principles with a dual axis sun tracking system. The glass sphere is used to concentrate diffused sunlight into a small surface of tiny solar panels.

Could a glass sphere be the future for solar energy?

Luckily, there is a potential solution. Rawlemon, a solar energy company started by a German architect named Andre Broessel, has been working on a spherical solar energy generator that is potentially more efficient than a standard solar panel. Broessel believes this glass sphere could possibly be the future for solar energy.

Can a spherical Sun power generator concentrate Moonlight?

The "beta.ray" is apparently even able to concentrate moonlight unlike conventional solar panels, but the power output from moonlight is very minimal at best. There are many different applications the spherical sun power generator can be used for.
