

Investment value of New Zealand energy storage power station

Overview

What is the NZ battery project?

The NZ Battery Project was set up in 2020 to explore possible renewable energy storage solutions for when our hydro lakes run low for long periods. A pumped hydro scheme at Lake Onslow was one of the options being explored. The Government stopped the Lake Onslow investigations in late 2023.

Why is New Zealand a good place to invest in renewables?

Structured for growth. Global demand for renewables is skyrocketing, and New Zealand is perfectly positioned to meet it, thanks to our abundance of accessible resources generated by hydro, wind, solar and geothermal.

Will Rankine power supply increase wholesale electricity prices in New Zealand?

Concept Consulting's modelling shows that without thermal generation from the Rankine units as part of New Zealand's energy storage solution, wholesale electricity prices would likely be 60% higher in the short-term (the next two-to-three years) and 11% higher in the long-term (ten+ years).

Why should you invest in New Zealand's energy hubs?

For global industrial players with high energy needs, New Zealand offers a great opportunity to grow in a low-emissions economy, backed by renewable energy sources. Our energy hubs are locations designed to optimise energy use, reduce transmission requirements, and capture economies of scale not available to standalone operations.
