

Middle East Off-Grid Solar Containerized Fixed Type

Overview

What is an off-grid solar project?

Off-Grid Project Deployments: Off-grid solar projects can provide electricity to remote areas which currently lack access to the main grid, thereby improving energy access and promoting self-sufficiency.

Will solar power prices reach grid parity?

This trend will continue to increase as solar power prices reach grid parity. In 2019, the global estimated additions of solar photovoltaic (PV) reached almost 138 GW (Figure 1). Within the Middle East and North Africa (MENA) region, the increased industrial activity and drive towards renewables is reflected in each country's strategy.

How can we triple off-grid renewables capacity?

To triple off-grid renewables capacity from the 2023 baseline to a projected 38.7 gigawatts by 2030, governments and other stakeholders must prioritise the following actions: Implement supportive policies and regulations that create an enabling environment for off-grid solutions (e.g. streamline permitting and licensing, market access, tariffs).

Should off-grid renewables be deployed in developing countries?

Given the role they play in climate and development goals in rural areas, off-grid renewables deployment efforts in developing countries should be accelerated, underpinned by strong international cooperation and multi-stakeholder partnerships, which the International Renewable Energy Agency (IRENA) has been advocating for.

Middle East Off-Grid Solar Containerized Fixed Type

[MENA Solar and Renewable Energy Report](#)

Introduction Renewable energy usage has been growing significantly over the past 12 months. This trend will continue to increase as solar power prices reach grid parity. In 2019, ...
