# New solar container outdoor power in Bergen Norway

## Overview

---

Can Norway's buildings generate enough solar energy?

A new study has revealed that Norway's buildings could generate enough solar energy to meet nearly half of the country's annual electricity demand.

Is Norway a good place for solar energy?

Snow, cold and hardly any sun for four months of the year: at first glance, Norway might not seem like the ideal place for a prospering solar energy industry. Nevertheless, Norway is making great strides in developing the technology, materials and solutions needed to make use of the largest energy source in our solar system.

Are Norwegian solar panels eco-friendly?

The ecological footprint of solar panels made with materials from Norway is therefore extremely small. REC Solar's factory in Fiskå in southwestern Norway has even been awarded a certificate for production of the world's cleanest silicon. Not only is Norwegian silicon production the world's cleanest, it is also the world's most energy efficient.

Is solar energy a key player in Norway's climate strategy?

The findings suggest that while the technical promise of solar energy in Norway is substantial, achieving it will require coordinated investment in infrastructure and policy. The report positions solar energy not just as a complementary force to Norway's hydropower dominance, but as a key player in the country's broader climate strategy.
