# Outdoor on-site energy solar self-operation

## Overview

---

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as “behind-the-meter” (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

What are onsite solar installations?

Onsite solar installations are renewable energy systems deployed directly on your business premises. These systems offer immediate and visible benefits while giving you direct control over your energy generation.

Can solar energy storage systems improve self-consumption and self-sufficiency?

As energy storage systems are typically not installed with residential solar photovoltaic (PV) systems, any “excess” solar energy exceeding the house load remains unharvested or is exported to the grid. This paper introduces an approach towards a system design for improved PV self-consumption and self-sufficiency.

Are offsite solar systems right for You?

Unlike rooftop installations, these systems are easily accessible for cleaning and repairs, which can lead to better long-term performance and reliability. When physical space is limited or energy requirements exceed onsite generation capacity, offsite solar solutions provide a viable alternative.

## Outdoor on-site energy solar self-operation

### [Portable Power Stations, Solar Generators](#)

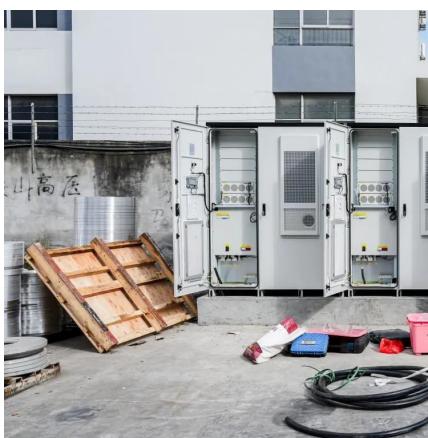

Experience the power of Goal Zero by improving your lifestyle with our portable power stations, solar generators, solar panels, power banks, and home energy storage solutions.
