

Professional inspection of new energy battery cabinets

Overview

What testing systems are available in our battery labs?

Our Battery Labs have shock and vibration testing systems with a maximum force vector of 120 kN, mounting surfaces of 1.20 x 1.20 m and a maximum load of up to 1,000 kg. Shaker tests are also possible under thermal and climatic superposition with simultaneous loading/unloading.

What is the IEC 62619 battery test?

The IEC 62619 battery test sets safety benchmarks for industrial lithium battery applications, including safety requirements and testing procedures for secondary lithium cells and batteries used in industrial applications, including stationary systems.

What tests are conducted at the Offenbach battery test facility?

Below are some of the most sought-after tests conducted at our Offenbach battery test facility. The UN 38.3 transport test is a globally mandated safety standard for the transport of lithium batteries and lithium cells.

What certifications are required for International Lithium battery transport?

Mandatory for international lithium battery transport (compliant with ADR, ICAO, IMDG, and DOT regulations). The IEC 62133 certification test is one of the most widely recognized standards for the safety of portable, secondary lithium batteries.
