

# Replace solar inverter

## Overview

---

How to choose a solar inverter?

Examine the inverter's cooling system. A cooling system is needed for any electrical devices. For a solar inverter which might be installed outside a house or in the open air, it can produce lots of heat from sunlight and working. Due to this concern, you must choose an inverter equipped with a cooling system which works efficiently.

Is a solar inverter a converter?

A solar inverter is really a converter, though the rules of physics say otherwise. A solar power inverter converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC.) Most homes use AC rather than DC energy. DC energy is not safe to use in homes.

Do solar panels need inverters?

Conversion of electricity: Solar panels produce DC electricity, while your home's power outlets need AC electricity. The inverter plays a vital role in converting DC electricity into AC electricity. Optimising performance: Solar inverters also help monitor and optimise the performance of your solar panels.
