

# Saint Lucia Wind Solar and Energy Storage New Energy

## Overview

---

Is Saint Lucia a good place to get electricity?

Saint Lucia has substantial potential for electricity generated by renewable energy. Solar energy potential is estimated at 36 MW, equivalent to about 41 percent of installed capacity for electricity generation using fossil fuels. Moreover, Saint Lucia is estimated to have huge geothermal resource potential, about 680 MW.

How can Saint Lucia achieve its planned energy transition?

The path to Saint Lucia's planned energy transition requires massive deployment of an applicable set of proven clean-energy technologies, taking advantage of the country's full renewable energy potential, particularly solar, wind, and geothermal resources.

What is the energy potential of Saint Lucia?

Solar energy potential is estimated at 36 MW, equivalent to about 41 percent of installed capacity for electricity generation using fossil fuels. Moreover, Saint Lucia is estimated to have huge geothermal resource potential, about 680 MW. However, this potential is in the early stages of evaluation.

Does Saint Lucia have geothermal resources?

Moreover, Saint Lucia is estimated to have huge geothermal resource potential, about 680 MW. However, this potential is in the early stages of evaluation. The estimated potential for wind energy in power generation is 42 MW.
