

Overview

Will Envision Energy's 8 MWh battery fit in a 20 ft 6 m shipping container?

Envision Energy announced an 8-MWh, grid-scale battery that fits in a 20-ft (6-m) shipping container this week while at the third Electrical Energy Storage Alliance (EESA) exhibition held in Shanghai. Taken from Envision Energy's website, this is a possible design configuration of its 8-MWh, 20-ft (6-m) container battery It's colossal.

Where do you store solar energy?

China leads the world in terms of renewable energy resources like solar power. And not just by a small margin either, making over twice as much solar power as the next highest country, the USA. Where do you store any excess solar energy for use when the sun isn't shining?

Answer: in ridiculously big batteries.

How much energy does a liquid cooled container hold?

The latest generation product has an energy density of more than 440 Wh/l, a roundtrip efficiency of 96%, and a cycle lifetime of nearly 16,000 charge-discharge cycles. The liquid-cooled system has a voltage range from 1500 V - 2000 V and is configurable for storage durations of two to eight hours. The container weighs around 55 tons.

How much does an energy storage system weigh?

All in, the system weighs about 55 tons (50 tonnes) To put it into simple terms, at 1,500 volts DC, it could theoretically power an average US home at 1 kW continuously for about 640 hours - a few hours shy of 27 days. Not that this energy storage system is designed for such a thing.
