

# Solar container outdoor power automatically shuts down

## Overview

---

What happens if a solar system goes out?

If solar systems were still feeding electricity into the grid, it could pose a serious risk to these workers. To maintain power during an outage, you'll need a solar battery backup system. Batteries store the excess energy your solar panels produce during the day.

How does a solar system work?

During normal operation, these systems allow homeowners to use solar-generated power and send any excess electricity back to the grid, often earning credits through net metering. With a traditional grid-tied system, when the grid goes down, your solar system is designed to shut off automatically.

Why should I integrate battery storage with my solar energy system?

Power outages can happen for a variety of reasons, from storms to grid failures. By integrating battery storage with your solar energy system, you can take control of your power and ensure your home stays safe and comfortable no matter the circumstances. Ready to explore your options?

.

Do you need a solar battery backup system?

To maintain power during an outage, you'll need a solar battery backup system. Batteries store the excess energy your solar panels produce during the day. In the event of a power outage, they automatically disconnect from the grid and supply electricity to your home. Benefits of a solar battery system include:
