# **Solar polycrystalline panels and monocrystalline panels**

## Overview

---

Are monocrystalline and polycrystalline solar panels the same?

They're both made from silicon; many solar panel manufacturers produce monocrystalline and polycrystalline panels. Both monocrystalline and polycrystalline solar panels can be good choices for your home, but there are key differences you should understand before making a decision.

What is a polycrystalline solar panel?

Similar to monocrystalline panels, polycrystalline panels are made of silicon solar cells. However, the cooling process is different, which causes multiple crystals to form, as opposed to one. Polycrystalline panels used on residential homes usually contain 60 solar cells. 3. Thin-film.

What does a monocrystalline solar panel look like?

Monocrystalline panels are typically black with rounded edges and a uniform appearance. You can also check the product label or specifications provided by the manufacturer. B. Can I mix monocrystalline and polycrystalline solar panels?

How much power does a monocrystalline solar panel produce?

Most monocrystalline panels on the market today will have a power output rating of at least 320 watts, but can go up to around 375 watts or higher! Polycrystalline panel efficiency ratings will typically range from 15% to 17%. The lower efficiency ratings are due to how electrons move through the solar cell.
