

# Syria Emergency Energy Storage Power Supply

## Overview

---

What if Syria doesn't have reliable energy supplies?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government, making it a key point of leverage. Qatar and Türkiye have stepped in to provide short-term assistance. The two states have provided two floating power stations, while Türkiye is also connecting its grid to Syria.

What is the Syria electricity emergency project (seep)?

The Syria Electricity Emergency Project (SEEP) will rehabilitate damaged transmission lines and transformer substations and provide technical assistance to support the development of the electricity sector and build the capacity of its institutions.

Why is the electricity sector struggling in Syria?

The electricity sector has long struggled to meet demand, especially over the past five years, leaving large segments of the population and economy in a persistent state of energy insecurity. Syria's electricity transmission and distribution infrastructure suffers from high losses and needs urgent restoration and modernization.

Why does Syria have a low electricity supply?

The war has seen a drop in electricity generation capacity from 8 500 Megawatts to just 3 500, primarily due to the destruction of key power plants including Mahardah, Aleppo and Zayzoun. The lack of reliable energy supplies is a major concern for Syrian citizens and its new government. Syria's oil and gas sector is in an even worse state.
