

The purpose of Benin energy storage power supply

Overview

Why is Benin reliant on electricity imports?

Benin is reliant on electricity imports for a significant share of its energy supply. Reform programmes, including plans for electrification, have been put in place in the country, where only 30% of the population had access to electricity in 2017.

How much energy does Benin consume?

Benin consumes 1.1 TWh of energy annually, with electricity accounting for only two percent of its net energy consumption. Thirty-two percent of Benin's population has access to electric power, and the country is reliant on biomass and imported petroleum products for 97 percent of its energy demand.

What are the different types of energy transformation in Benin?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Benin for 2022. Another important form of transformation is the generation of electricity.

Why do we need a sectoral breakdown of the energy system?

Both are needed to fully understand the energy system. The sectoral breakdown of a country's energy demand, which is based on its economy, geography and history, can greatly impact its energy needs and which energy sources it relies on to meet those needs – such as fueling automobiles, heating or cooling homes or running factories.
