

Weather station uses 80kWh solar-powered container from Madagascar

Overview

What is a solar weather station?

PV weather station designed for solar operation. The solar panels of the photovoltaic weather station are responsible for capturing solar energy and converting it into electrical energy to provide power for the entire weather station.

Can a solar-powered weather station be used for agriculture?

This study presents a novel, low-cost smart solar-powered weather station that utilizes internet of things technology and is tailored to the needs of agriculture. The weather station records a range of agricultural data, including air temperature, humidity, air pressure, wind speed and direction, solar radiation, and precipitation.

How does a photovoltaic weather station work?

The solar panels of the photovoltaic weather station are responsible for capturing solar energy and converting it into electrical energy to provide power for the entire weather station. The mounting bracket firmly supports the solar panel to ensure its orientation angle and better receive solar energy.

How do smart weather stations compare and evaluate weather data?

In order to compare and evaluate the data received by smart weather station, data was also taken from two national weather stations near the system's test site and the following variables were evaluated: air temperature, humidity, relative pressure, wind speed, wind direction, solar radiation and precipitation. Fig. 12.
