

# What are the inverters with the lowest power

## Overview

---

### Which solar inverter should I Choose?

The solar inverter you choose will need to be compatible solar system type you are installing: Grid-tied inverters are meant for grid-tied solar systems, the most common system type. They manage a two-way relationship with the grid, exporting solar power to it, and importing utility power from it as required.

### What is a solar inverter?

Solar inverters are the heart of any solar energy system, converting the direct current (DC) electricity generated by solar panels into alternating current (AC) power for homes, businesses, or utility grids.

### What type of solar inverter makes the most sense?

Those are the kinds of things that can make a real difference in what type of inverter solution makes the most sense," Kurchin added. When it comes to home solar installation, homeowners have three types of solar inverters to consider: string inverters, string inverters with DC power optimizers and microinverters.

### Can a solar inverter power a home?

Without a solar inverter, you wouldn't be able to use those solar panels to power your home. A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on.
