

# What are the solar supporting inverters

## Overview

---

Are solar inverters right for your solar system?

Solar inverters are the brains of your solar system, and choosing the right type can significantly impact your system's performance, monitoring capabilities, and long-term value.

What type of inverter do I Need?

If you want backup power with a grid-tied system, you have options with all inverter types: Microinverter Systems: Use AC-coupled battery solutions with separate inverters for solar and batteries String and Optimizer Systems: Typically use DC-coupled solutions with hybrid inverters that handle both solar and battery functions.

What is a solar inverter?

A solar inverter is a crucial part of any solar power system. It not only converts solar energy into usable electricity but also manages the flow of energy, monitors performance, and ensures safety protocols are in place. Without it, solar panels alone would be ineffective for home or business use.

Why do you need a solar inverter?

The inverter is not just an accessory; it is the heart and brain of your solar power system. It dictates how efficiently you use your energy, whether you can add batteries in the future, and how resilient your home is during an outage.
