

# What is the storage capacity of Costa Rica's energy storage power station

## Overview

---

How much electricity does Costa Rica use?

Costa Rica is on an upward trajectory with its electricity consumption, reaching 2560 kWh per person in 2025, surpassing the previous record of 2516 kWh per person in 2021. This marks an increase of 44 kWh per person, demonstrating a positive trend in electricity use which can be attributed to growing demand and better accessibility.

How can Costa Rica improve its energy resilience & environmental stewardship?

By sustaining and building on these trends, particularly through diversified sources like solar and possibly nuclear, Costa Rica can enhance its energy resilience and environmental stewardship. Costa Rica's electricity mix includes 76% Hydropower, 11% Wind and 11% Geothermal. Low-carbon generation reached a record high in 2025.

Does Costa Rica need clean electricity?

Costa Rica's impressive transition to low-carbon electricity is a significant achievement in mitigating climate change and reducing air pollution. However, as the country looks to electrify other sectors like transport, heating, and industry, the demand for clean electricity is poised to increase substantially.

Is Costa Rica a sustainable country?

Costa Rica has achieved a remarkable milestone in its journey towards sustainable development, with more than 98% of its electricity generation sourced from low-carbon methods between October 2024 and September 2025. Hydropower accounts for more than three-quarters of this clean energy, with wind and geothermal contributing around 11% each.

## What is the storage capacity of Costa Rica's energy storage power station

### COSTA RICA ENERGY HARVESTING AND STORAGE

Costa Rica Power Plant Energy Storage System Classification Costa Rica had an estimated installed generating capacity of 3,039 MW in 2012 and produced an estimated 10.05 billion ...
