

# What should I do if the battery cabinet does not contain batteries

## Overview

---

How do you store a lithium ion battery?

In general lithium-ion batteries should always be removed from the devices they power and stored at 60-70% of the pack's capacity. If a battery will go unused for three more days, it should be stored in a cabinet or larger store. Once disconnected, storing lithium-ion batteries follows similar principles as the correct storage of chemicals.

What do I do if the battery cannot be used?

If the «This battery cannot be used Choose battery designated for use in this camera» message is related to a lens error, do the following: Disconnect the lens from the camera and make sure that its metal contacts are clean and intact as well as the lens contacts on the camera body.

How do you store a battery?

Ventilation systems: Disperse hot air and keep closed to prevent fumes in case of a fire . Adequate space: Batteries should be stored on shelving and should not be stacked or allowed to touch each other. Fire detection and fire suppression systems.

What happens if a lithium battery is not in use?

When lithium batteries are not in use, it does not mean that they are completely dormant. These batteries naturally lose a small percentage of their total stored power over time. It is a slow process and is called self-discharge. This process occurs due to the chemical reactions within the batteries.
